DIAB Engineering
20 Foskew Way
Geraldton WA 6532

Dear Steve,

**Letter of Commendation - Exceptional performance, SAG Mill Scaffolding works-
DIAB Engineering and MonZon No limits scaffold system.**

I would like to recognise the great performance of both your company's workforce and the new, innovative scaffolding system that you are using, namely the MonZon No Limits product.

Previously, the scaffolding requirements for the internal sandblast and coating of our SAG Mills have been the longest duration task for this shutdown critical path project. By using careful planning, a new, innovative scaffold system, and a dedicated and skilled DIAB scaffolding team, this task was completed safely and a full 18 hours quicker than previous attempts using traditional scaffolding. This achievement is of particular note, given the hot, restrictive and odd-shaped vessel the teams were working in to create a safe work area for all parties involved.

The time and resources saved by DIAB using this smart, innovative and safe approach to the task brought the critical path SAG Mill reline in ahead of the planned time and allowed the shut teams to give focus across more of the plant, creating greater maintenance benefits across the wider shutdown.

We value and thank the DIAB Engineering team for its safety, dedication and innovative systems to get the best results for our organisation. We look forward to continued work with DIAB Engineering and the MonZon No Limits scaffold systems.

Yours sincerely,

Jarryd Hollonds
Telfer Mill Maintenance Superintendent
