PROTECT IT[™]

**New innovative system developed
for weather protection!**

Simplicity in any weather

Mobile Weather Protections is a growing market as the requirements for protected construction and maintenance work increase. We saw a clear potential to bring improved SAFETY and increased SIMPLICITY to our customer with the same ideas building up the NO LIMIT system converted to a modern mobile weather protection.

With a modular design and re-use of components from our lightweight aluminum scaffolding system, adding many clever functionalities designed around the new developed very strong Roof Ridge and Lattice Beam we are proud to present Monzon PROTECT IT.

Soft bends at the Roof Ridge and Keeder ends for an easier tarpaulin assembly.

The new patented Double Guard Rail from our scaffolding system make it possible to pre-assemble the sections at the ground for a safer and faster installation.

Ultra strong Roof Ridge allow a span of 35 m without any need of supporting wires.

Two integrated keeder trails make a heating channel possible to eliminates snow load.

The Integrated ring system makes it possible to use the Double Guard Rails and Ledgers from your MODULAR LIGHT scaffolding system.

Lattice beams in 1, 2 and 3 meter lengths improves flexibility, storage and transportation.

The roof can be equipped with battery powered electric motors. Multiple wireless remote controls with 100m range can be used for the same motor.

The Roof Frame fits all types of scaffolding including 750-beam.

With ScaffCAD you will design and make wind load simulation on your scaffolding and weather protection as one construction.
